CASH RECEIPTS FROM FARMING IN OHIO
1965

Cash receipts to Ohio farmers from marketings and government payments totaled \$1,190,918,000 in 1965. Return from the sale of farm commodities were up about two and one-half percent from the revised 1964 figure, while government payments rose 39 percent. Total cash receipts from farming were over four percent higher than a year earlier.

Farm marketings during 1965 amounted to \$1,113,372,000. Of this total, cash receipts from the sale of livestock and livestock products accounted for \$671,513,000 or 60.3 percent. The marketings of crops accounted for \$441,859,000 or 39.7 percent of the total. Cash receipts from crops were down three percent while cash receipts from livestock and livestock products were up nearly seven percent from the comparable revised 1964 estimates. Revisions of the 1964 estimates changed livestock only slightly upward while cash receipts from crops were increased about five and one-half percent.

Reduction of 12 percent in the food grains, three percent in the feed crops, and four percent in soybeans cash receipts contributed to the three percent decline in receipts from crops from the revised 1964 estimates. Income from wheat and corn marketings fell 12 percent and four percent respectively. Some of the increases from a year ago were in hay (7 percent), oats (3 percent), sugar beets (43 percent), and greenhouse and nursery products (6 percent). The three percent increase in cash receipts from vegetables is due primarily to the higher total for tomatoes for processing. A five percent lower return from fruits, reflects sharp reductions in cherries, peaches, and strawberries with only partially offsetting increases in receipts from apples and grapes.

Cash receipts from meat animals were up over 14 percent from 1964. Higher returns from cattle and calves, hogs and sheep and lambs were almost totally due to higher prices. Only cattle and calves showed any increase in pounds marketed, and that increase was only one percent. Hog and sheep and lamb marketings were lower than in 1964. Cash receipts from dairy products in 1965 were virtually unchanged from a year earlier. Receipts from poultry were down a little over three percent from the revised 1964 estimate with only broilers showing an increase. Cash receipts from wool marketed were down 15 percent and honey and beeswax receipts were down 32 percent.

The sale of dairy products continued to be the largest single source of cash receipts to Ohio farms, accounting for 19.4 percent of the State total returns from farm marketings. Cattle and calves ranked second, and hogs third, accounting for 16.2 and 15.1 percent respectively. Soybeans, corn, and poultry and eggs each accounted for close to 10 percent.

The five leading counties in total cash receipts from farming--Fulton, Darke, Wayne, Mercer and Wood--each had total returns of over \$25,000,000 in 1965. Wayne County continued as the leading county in the sale of dairy products, Fulton County had the greatest returns from the sale of cattle and calves, and Clinton County led in cash receipts from the sale of hogs in 1965. Leading in cash receipts for corn, wheat, and soybeans was Wood County.

PROCEDURE

Estimates of cash receipts by county from farm marketing in Ohio were published initially in 1927 and annually each year since 1929. These county estimates of cash receipts are published by the Department of Agricultural Economics and Rural Sociology of the Ohio State University and the Ohio Agricultural Research and Development Center in cooperation with the Statistical Reporting Service of the U. S. Department of Agriculture. This bulletin contains the 1965 Ohio county cash receipts estimates, and revised 1964 state commodity estimates.

Cash receipts represent gross returns from the actual sale of crops and livestock during the calendar year. The value of home consumption and inter-farm sales is not included as cash receipts. Production expenses such as feed, fertilizer and purchases of feeder animals are not subtracted from cash receipts. The addition of government payments to cash receipts provides a measure of gross cash income, or total cash receipts from farming.

Gross and Net Farm Income data are included in this bulletin for the first time. This information is available only at the State level, but the relative income situation of the Ohio farmer can be observed over a period of years. It is also interesting to compare the net income figures with total cash receipts for the State by years.

Current cash receipts estimates for Ohio and the remaining States appear in the USDA's Farm Income Situation -203--Supplement, August, 1966. These estimates are prepared by the Economic Research Service of the U. S. Department of Agriculture from basic data provided by the Statistical Reporting Service, the 1959 Census of Agriculture, and other sources.

In preparing the 1965 estimates consideration was given to information obtained from the 1964 U. S. Census of Agriculture. Revisions of state estimates on the basis of enumerated Census totals for 1964 crop and livestock items have not been made. However, in allocating the State total to counties consideration was given to Census distribution on some items. For these items the 1965 estimates will not be entirely comparable with 1964 estimates published a year ago. The State estimates published in this bulletin may differ from previously published estimates. These differences are caused by revisions in marketings, inshipments, inventory numbers, etc., as more complete information becomes available.

County estimates of cash receipts from the sale of dairy products for 1965 are not entirely comparable with 1964 or earlier years. Data from milk market administrators provided a basis for allocating receipts of milk from producers at plants operating under the Federal Order to counties. Data from the Animal Health Division of the Agricultural Research Service provided information on the location by county of producers selling milk to dairy plants. The number of producers in each county was used as a basis of breaking down total receipts at plants not under Federal Order to counties. This assumes annual deliveries per producer to each plant would not differ significantly at the county level. Each grade of milk was considered separately in arriving at the county total cash receipts.

As in recent bulletins the sale of dairy cows and veal calves has been included with the sale of cattle and calves. Poultry cash receipts include income from the sale of eggs, farm chickens, broilers and turkeys during 1965. Because of the confidential nature of the data, cash receipts from turkey eggs and other poultry are included as other livestock. Included with sheep cash receipts are returns from wool sales as well as income from sale of sheep and lambs.

Cash receipts from the sale of greenhouse vegetables are included with vegetable cash receipts, and not with greenhouse and nursery. The county vegetable estimates are a combination of field grown vegetables and vegetables grown under glass. For purposes of ranking, potatoes were considered as separate from vegetable cash receipts. Cash receipts from fruit crops are made up of returns from small fruits as well as from tree fruits and nuts.

In 1965 government payments amounted to \$77,546,000 or six and one-half percent of the total cash receipts in Ohio. The Feed Grain Program was again the largest program accounting for \$53,610,000. The Wheat Program accounted for \$14,303,000 conservation payments, \$6,393,000 and the Soil Bank Program, \$1,689,000. Payments under the Sugar Act and Wool Act accounted for \$918,000 and \$633,000 respectively.

Two important factors influencing any comparison by counties are the size of the counties and the major source of cash receipts in each county. Included in Table V are the average cash receipts per farm and per acre by county. These averages aid in the comparison of counties with similar farming practices better than a comparison of the total cash receipts. The average per farm and per acre are based on the 1964 U. S. Census of Agriculture "number of farms" and acres of "all land in farms." In some counties the average per acre cash receipts are relatively low because the Census designated acres of "all land in farms" includes a considerable amount of land not cultivated and some not even used for pasture. The 1964 Census defined a farm as any tract operated as a unit of 10 or more acres if the estimated sales of agricultural products for the year amounted or normally would amount to at least \$50; or if less than 10 acres, had sales of agricultural products totaling \$250 or more.

County estimates of cash receipts do not include the value of commodities used on farms. For example, producers may market grain and hay in the form of beef or milk rather than in its original form. By counties the relative importance of some commodities would be different if the value of these commodities used on farms where produced were computed. Assuming a season average price for each commodity, the value of selected crops used on farms where produced in 1965 would amount to \$130,000,000 for corn, \$20,000,000 for oats and \$75,000,000 for hay.

The publication of any bulletin is only possible through the cooperation and aid of many individuals. The preparation of this bulletin has been possible through the efforts of many people. Included are personnel of the Ohio Agricultural Stabilization and Conservation Service, Federal Milk Market Orders operating in Ohio, the Ohio Department of Agriculture, the Ohio Agricultural Research and Development Center and the Agricultural Research Service. Special recognition is due the professional and clerical work done by the staff of the Ohio office of the Statistical Reporting Service. However, the greatest recognition is in order for the people who provided basic data from which the information for this publication was compiled--farm operators, the representatives of grain elevators and livestock markets, etc., and other interested parties.

TABLE I

CASH RECEIPTS FROM FARM MARKETINGS AND GOVERNMENT PAYMENTS, OHIO, 1930-1965

Year	Farm Marketings			Govern- ment Payments	Total Cash Receipts and Government Payments	Percent of All Commodities	
	Livestock and Livestock Products	Crops	Total Livestock and Crops			Livestock and Livestock Products	Crops
